SCIENCE

1- Four children measured the length of a table which was found to be about 2 metres. Each of them used different techniques to measure it.

(i) Sam measured it with a half-metre-long thread.

(ii) Ana measured it with a 15 cm scale from her geometry box.

(iii) Reena measured it using her hand span.

(iv) Salim measured it using a 5 m long measuring tape.

Which one of them would get the most accurate length? Give a reason for your answer.

2- Mention two examples for each of the following motions:

(i) Linear motion   (ii) Spinning motion   (iii) Oscillatory motion

(iv) Periodic motion   (v) Vibrational motion (vi) Circular motion

(vii) Random motion

3- A 30 cm scale has one end broken. The mark at the broken end is 2.6 cm. How would you use it to measure the length of your pencil?

4- Radha was performing an experiment in the Science Laboratory. The metre scale, that she was using to measure the length of a string, was worn out between its 1 cm and its 2 cm marks, due to overuse.

(a) She measures the length of a string by keeping its one end at the 3.0 cm mark. If the other end of the string 'reads' 92.8 cm, find the length of the string.

(b) Write the precautions, to be followed, when a metre scale is being used for measuring a given length.
